

DYNAMIC ROBOTIC SOLUTIONS

After Market Service

ADDITIONAL TOP WORK

Secure your production
avoiding downtime

Description:

Your production schedules are very demanding and the downtime on your robotized system must be kept to the very minimum in order to assure you the best profitability.

The redundant version of the KMT Streamline V pump is equipped with two top-works (intensifier). In case of a problem on the top works in operation, the second one, kept as back up, can be utilised within seconds and the production kept going without downtime for immediate repair.

A complete retrofit kit including top-work with the connection package including all tubing, hoses and fittings is available for your single intensifier pump.

Please contact us for more information. Our technical team does several of these retrofits every year.

Customer benefits:

- Secure your production avoiding downtime
- More flexibility with your maintenance schedule
- Easy to retrofit on existing Streamline IV and Streamline V pumps with single top work.
- Limited investment, fast and predictable pay-back

NEW: Top-work Hour Meter for SL IV

The new hour meter system calculates separately the hours of operation of each top work. This makes it easier for you to foresee and plan your preventive maintenance schedule more accurately. This device is available as retrofit kit, easy to install.
